Lead testing, Union City Area School District

All fixtures used for consuming water, 172, were tested 5/25/2018 by Microbac. The reported results indicated that lead levels in the buildings tested are below the United States Environmental Protection Agency (EPA) action level 0.015 AL.

Union City Area School District will test $\frac{1}{4}$ of fixtures in each building that are used for water consumption, (examples: Drinking fountains, kitchen sinks, classroom sinks, teacher's lounge sinks, nurse's sinks, and any other sinks used for consumption), on a yearly basis, rotating the testing each year so that by the 4th year all fixtures used for consuming water have been tested. Then on year 5, we will start the process again, using the same process of testing for the first $\frac{1}{4}$ of fixtures.
