ACES Conference	February

FFA Advisor: Corey Bailey
cbailey@ucasd.org

Hello students of Union City, have you ever wondered what goes on in small engine repair class? Well, I'm here to tell you all about what we have and are currently doing in the class. At the beginning of the year, our excellent teacher Mr. Bailey gave us the run through of the class. Such as safety precautions, what kind of engines we would be working on, as well as class expectations. Throughout the first quarter, we would do our chapter work, which helps us to learn all about the components of our engines and allow us to learn what parts do what functions. Then typically after we finish 2 chapters of our work we get to do hands on learning with our engines. So how working on the motor works is you and your partner go to your station with your engine and then Mr. Bailey demonstrates how to disassemble and then reassemble the engine. He also says never to work ahead which is very important or else you can forget a piece of reassembling, trust me I know this from first-hand experience. So that is what Union City's small engine repair class normally consists of.

Officer Spotlight

By Owen Kerns

My name is Owen Kerns and I have been in the FFA for two years. As Historian, I look up what has happened in Union City's past. I went to Spring Round Up last year and I did cattle heifer judging, and at Fall Round up I took tests about wildlife. I support UC FFA by helping with floats and activities. Outside of FFA, I am a part of the trap team, I hunt, and I play football. There are many things to explore throughout the FFA.
