

Signing In To Google Account

We recommend using Google Chrome

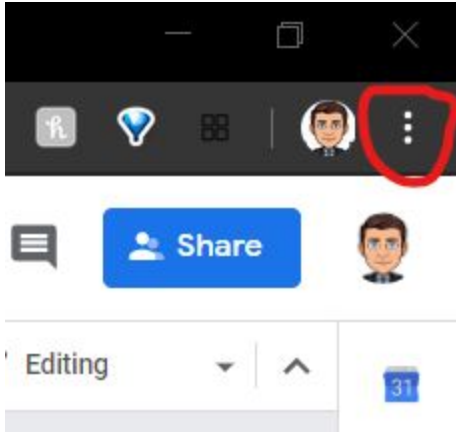

You can download their browser here: [Chrome Download](#), you'll find instructions on how to install [here](#).

The most common problem we've had parents and students encounter at home is other users being signed in to the device. These steps will help your students get signed in.

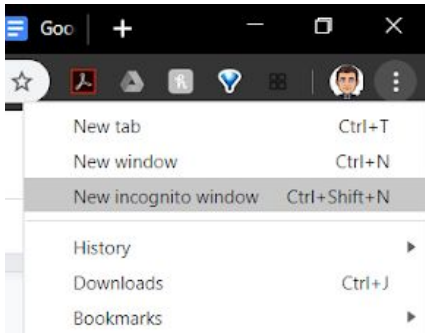

Method 1

This method should work for most browsers but it may not be called the same thing.

- In the top left corner under the X you will see three dots. Click those.

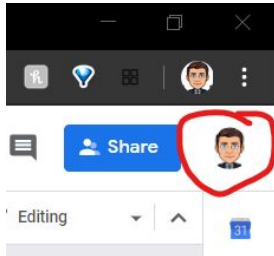

- Click "New incognito window." or "New private window."

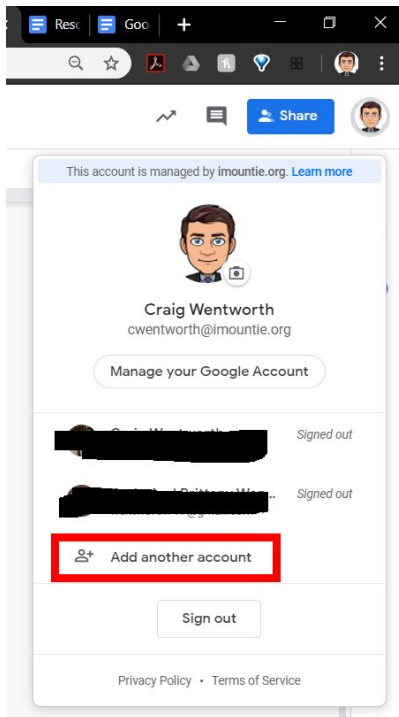

- In this new window go to the website needed for the student:
 - mail.google.com
 - drive.google.com
 - meet.google.com
 - classroom.google.com
- Sign in to the account. A student will need to use their entire email account: username@imountie.org
- If they cannot remember their password then please contact their teacher.

Method 2

- Go to the needed website:
 - mail.google.com
 - drive.google.com
 - meet.google.com
 - classroom.google.com
- In the top right of the window it will show an avatar or initials for the current user. Click the icon.

- Click “Add another account”

- Sign in to student's imountie account
- If this has been done before you will just click on the student's account to switch to a new user.
