

# CRASH SUMMARY REPORT

## SFY 2021

**Prepared By:**

**Erie County Regional Planning  
Metropolitan Planning Organization  
2900 Columbus Avenue  
Sandusky, Ohio 44870**

Document completed pursuant to 23 U.S.C. Section 409. The preparation of this document was financed in part by the Ohio Department of Transportation (ODOT) and the Federal Highway Administration (FHWA), in cooperation with local units of government. The contents do not necessarily reflect the official view and policies of the State and/or United States (US) Department of Transportation. This report does not constitute a standard specification or regulation.

## **INTRODUCTION**

One of the main objectives of the Erie County Regional Planning Commission Metropolitan Planning Organization (ERPC) is to improve the safety of the existing transportation system. Through the study of traffic crash data, the identification of improvements needed to improve safety and level of service on existing roadways are determined. The primary purpose of this report is to summarize crash data that occurred in the ERCP MPO area (all of Erie County and the Lorain County portion of the City of Vermilion) during the 2017, 2018, and 2019 years. All data used to generate this report was supplied from the Ohio Department of Transportation's Transportation Information Mapping System (TIMS) and GIS Crash Analysis Tool (GCAT).

Traffic counts are available at some locations and efforts to attain traffic volumes for every roadway in the county are ongoing. Crash rate tables are updated as additional traffic counts become available. As some traffic volume data is not available at this time, the index list of crash related intersections is ranked upon the frequency of crashes at a particular location. It should be noted that this table is preliminary in the sense that these listings have been generated only as a tool as a place to start for any community evaluating crash locations. It is possible that as more detailed analysis of a specific location is done, it will be discovered that the problem is either better or worse than this listing has indicated.

Also contained in this report is an analysis of ERPC regional crash data trends for the years of 2018 and 2019.

## **SOURCE OF DATA**

ERPC maintains a computer file of traffic crashes that is received from the Ohio Department of Transportation's TIMS-GCAT program. The TIMS-GCAT system is populated with traffic crash records that are received from the Ohio Department of Public Safety (ODPS). The crash data contains crash records inclusive of all those located in the ERPC MPO region.

The data used in the creation of this report is as follows:

1. Total number of crashes for the last three years
2. Total number of fatal crashes for the last three years
3. Total number of pedestrian and bicycle related crashes for the last three years
4. Frequency Index Table (Number of crashes at particular intersection location)
5. Crash Rate Index Table (Crash Rate calculated where traffic counts available)
6. Various crash maps

## **METHODOLOGY**

All intersection locations having more than 9 crashes in a three-year period were considered high crash locations.

### **1. Frequency:**

Intersections are ranked according to the total number of crashes experienced at each location during a full three-year study period. Locations with 9 or more crashes during the three-year period are listed. The ranking shown is based upon data for years 2017-2019.

### **2. Crash Rate:**

Assessing intersection safety is commonly in terms of "Crash Rate" and expressed as "crashes per million vehicles entering the intersection". The crash rate provides a basis for identifying "high crash" sites. Typically, optimal levels for crash rates is 1.0 or below.

The crash rate takes into account the traffic volume at the intersection, which is one of the predictors of the quantitative risk of a crash. Crash Rates were calculated where Average Daily Traffic (ADT) counts were available and shown in the corresponding table for crash years 2017-2019.

The following equation was used to calculate crash rates:

$$R = \frac{1,000,000 \times C}{365 \times N \times V}$$

Where:

R = Crash rate expressed as accidents per million entering vehicles (MEV).

C = Total number of crashes in the study period.

N = Number of years of data.

V = Traffic volumes entering the intersection daily

## **Additional Traffic Crash Facts**

Additional traffic crash tables and graphs have been included in the report which summarize crash data across the ERPC region between years 2017-2019. The tables and graphs represent a summary of the information available from ODOT TIMS-GCAT software. The data provides a region wide analysis of information such as crashes by time of day, month, week, lighting and weather conditions, type of vehicles involved in crashes, speed, alcohol related crashes and type of crash.

Below is a summary of 2017 – 2019 crash statistics for the ERPC MPO region:

6,978 Total Crashes (26 Fatal, 1,495 Injury, 5,457 Property Damage Only)

- 2,424 occurred in 2017
- 2,253 occurred in 2018
- 2,301 occurred in 2019

Number of fatalities by year:

2017 – 8 fatalities

2018 – 7 fatalities

2019 – 11 fatalities

Number of incapacitating injuries by year:

2017 – 57 injuries

2018 – 52 injuries

2019 – 45 injuries

31.1% of total crashes occurred on Friday and Saturdays

21.2% of total crashes were rear-end type crashes

19.4% of total crashes involved people 65 years old and over

32.0% of total crashes involved young driver (15 years old – 25 years old)

11.9% of total crashes were speed related

5.8% of total crashes were distracted driving related

Of these crashes, drivers were distracted by:

6.3% -Manually operating an electronic communication device (texting, typing, dialing)

0.3% - Talking on hands-free communication device

1.2% - Talking on hand-held communication device

11.1% - Other activity with electronic device

2.2% - Passenger

35.4% - Other distraction inside the vehicle

67.1% - Other distraction outside vehicle

6.3% of total crashes indicated drugs and/or alcohol suspected

Of these crashes –

79.2% - alcohol suspected

20.8% - drugs suspected

1.7% of total crashes were motorcycle related

0.90% of total crashes were bicycle and pedestrian related

### ERPC MPO Region – Comparison Chart

| Category             | Number of Crashes |                 | Difference | Percent Change |
|----------------------|-------------------|-----------------|------------|----------------|
|                      | Years 2016-2018   | Years 2017-2019 |            |                |
| School Zone          | 21                | 27              | 6          | ↑ 28.6%        |
| Speed                | 822               | 830             | 8          | ↑ 1.0%         |
| 65 yrs and Older     | 1355              | 1355            | 0          | ↔ 0.0%         |
| Alcohol              | 349               | 347             | -2         | ↓ -0.6%        |
| Motorcycle           | 122               | 118             | -4         | ↓ -3.3%        |
| Fatalities           | 27                | 26              | -1         | ↓ -3.7%        |
| Youth (15yrs -25yrs) | 2409              | 2235            | -174       | ↓ -7.2%        |
| Drugs                | 100               | 91              | -9         | ↓ -9.0%        |
| Bicycle              | 25                | 22              | -3         | ↓ -12.0%       |
| Pedestrian           | 49                | 41              | -8         | ↓ -16.3%       |
| Distracted           | 491               | 407             | -84        | ↓ -17.1%       |
| Serious Injuries     | 213               | 154             | -59        | ↓ -27.7%       |
| Work Zone            | 247               | 134             | -113       | ↓ -45.7%       |

### CONCLUSION

In summary, the creation of this report is to assist in identifying those high crash locations within the ERPC MPO Region pursuant to 23 U.S.C 409. The frequency table was created by three years' worth of intersection only traffic crash data that was obtained from the Ohio Department of Transportation and Public Safety. The creation of the crash rate table included with this report was done by the analysis of crash data and available traffic count data. The data generated here will be incorporated in the ERPC MPO's Spot Safety Improvement Program, which allows for further study and priority groupings of specific high crash location areas. Again, it is important to note that this report is preliminary in the sense that these listings have been generated only as a tool as a place to start for any community evaluating crash locations. It is possible that as more detailed analysis of a specific location is done, it will be discovered that the problem is either better or worse than this listing has indicated.

**TABLE 1: HIGH CRASH INTERSECTION LOCATIONS BY FREQUENCY (YEARS 2017 - 2019)**

| RANK | JURISDICTION        | INTERSECTION                        | NUMBER OF CRASHES |
